## About

Omar Mohammad is a first generation Afghan-American born and raised in the Bay Area of California. He is the son of Said & Fariha Mohammad, refugees who evaded the Soviet Invasion of Afghanistan c. 1985. He is a designer, artist, and programmer creating work that surpasses boundaries and media. His work oscillates between the paradigms of self initiated projects and cultural/commercial clients through graphic/object/interactive pieces and speculative/critical studies. Through graphics, new media, architecture, and internet based works, he provides the world with art and design that generates discourse and inquiry, versus capital and advertisment.
